autokitchen

Watch panoramas using VR goggles

Create beautiful designs

autokitchen® software is built on the AutoCAD® OEM engine (which means it is stable, precise, and creates beautiful renders), but you don't have to own or know how to use AutoCAD® to use autokitchen®. Use autokitchen® to create detailed technical plans, sketches, artistic colorings, and powerful photorealistic renders. With autokitchen® your projects will be distinctive and original to your clients.

autokitchen® avoid incidents

The quality of the images will avoid misunderstandings with your customers. The power and flexibility of the program will allow you to show the cabinets as they really are no matter how complicated or bespoke they are. The listing of cabinets specifications, handles, moulding and appliances will reduce ordering mistakes and speed your quotations. The accuracy of the plans will avoid fitting and installation mistakes.

autokitchen® cloud service

Now you don't have to send emails with attached files to customers. The new Cloud Service allows you to upload the renders and panoramas, - the program will create a link automatically that can be opened on smart phones, tablets and computers so that they can share this with friends and family

EXCEPTIONAL SOFTWARE FOR EXCEPTIONAL DESIGNERS

"Autokitchen has been a part of my business for over ten years. The software is updated often and the technical support is top notch. The professional and precise drawings I am able to produce set me apart from my competition. Autokitchen is an integral part of my team!" Cyndi Mosher, AKBD, Owner of Beyond the Box - Kitchen Design.

Easy to learn and use.

The autokitchen® interface is clean, uncluttered and easy to understand and remember. The tabs are clearly labeled and grouped into main catagories. There is no need to use text commands. All you need is a regular two button mouse with a wheel. No CAD experience is required in order to be successful with autokitchen, full training and support (one to one) is provided.

Outstanding presentations.

You will like the way your projects look in autokitchen®, whether in black and white or in colour. The black and white plans can be very detailed and clear. You can decide on the position of cabinet labels, the style and position of dimension lines, create your own elevation symbols and select from many different title blocks or insert your own into autokitchen®. If you prefer a color presentation, you can create stunningly realistic images by selecting from many finishes, colors, textures and lights.

Powerful and flexible.

You can place cabinets and other elements anywhere in the drawing. You can move them, rotate them, elevate them in the air, place them at an angle or stack them against a wall. You can also alter the cabinetry catalogs to match the specifications of your cabinet provider and create counter tops of any shape and dimensions.

Unlimited choices of cabinetry.

autokitchen® includes Inframe and Lay-on doors cabinetry catalogues. The cabinetry can be easily modified before or after placement. Extensive modifications can be applied to the cabinets such as dimensions, frames, cuts, plinth adjustments, work surface profiles, door and handle styles and many others. In addition, you can create your own cabinets out of custom shapes, maintain and update your own catalogues to obtain the part list for manufacturing.

Save time.

Simplify your design process. Use autokitchen® versatility to your advantage. With autokitchen® there is no need to rely on guess-work. Present your clients with realistic representations of your designs in 3D. This will improve communication between you and your customer, and eliminate or minimize drawing changes.

Increase sales.

autokitchen® lets you create beautiful designs faster. Floor plans can include not only dimensions and cabinet labels but also notes for the installers, observations concerning plumbing and electrical equipment, schedules of appliances, and reminders and disclaimers. Your customers will enjoy the process. Spend more time with new and repeat customers, and less time redrawing.
